Project Name: Mahtomedi Ice Arena

Purpose: FSD – Final Site Drainage; Construct arena

Site Size: 60.57± acre parcel / 4.20± acres of disturbed area; existing and proposed impervious area is 4.32± acres and 5.57± acres, respectively

Location: 8100 75<sup>th</sup> Street, Grant

T-R-S: NE ¼, Section 28, T30N, R21W

District Rule: C, D

---

Recommendations: CAPROC

It is recommended that this Permit Application be given Conditional Approval Pending Receipt of Changes (CAPROC) and outstanding items related to the following items.

Rule D – Erosion and Sediment Control

1. Submit the following information per Rule D.4:

- (a) Name, address and phone number of party responsible for maintenance of all erosion and sediment control measures.
- (b) Provide documentation that an NPDES Permit has been applied for and submitted to the Minnesota Pollution Control Agency (MPCA).
- (c) A Storm Water Pollution Prevention Plan for projects that require an NPDES Permit.

Administrative

2. Submit the permit application with an original signature of the successful bidder to the District.
3. Send one final, signed 11x17 sized plan set to the District, and e-mail a full sized pdf copy to both the District and the District Engineer. Include a list of changes that have been made since approval by the RCWD Board.
4. Submit a copy of the plat or easements establishing drainage or flowage over stormwater management facilities, stormwater conveyances, ponds, wetlands, on-site floodplain up to the 100-year flood elevation, or any other hydrologic feature (if easements are required by the City of Grant).
5. The applicant must memorialize the responsibility for maintenance of stormwater facilities in a document executed by the property owner in a form acceptable to the District and recorded on the deed. Alternatively, a public permittee may meet the perpetual maintenance obligation by executing a programmatic or project-specific maintenance agreement with the District. A draft document should be submitted to the District for consideration prior to execution. (The agreement process requires submittal of the final original signed agreement to the District. If the applicant needs an original of the signed agreement, then two endorsed final agreements should be submitted.)
6. The applicant must submit a copy of receipt from County Recorder and signed/notarized attested easement (if required).
7. Applicant, or authorized representative of applicant, must submit a signed statement that applicant or another party reported to the MPCA and the Minnesota Department of Health: (a) the indicated subsurface contamination, and (b) the disturbance proposed for the site, as it concerns the contamination. The statement must include a copy of the notification unless it was not in writing, in which case the statement is to describe the form and circumstances of the notification. Attachments to the notification should not be submitted unless requested by the District.
8. The applicant or contractor must provide a construction schedule for the underground system (or communicate when the schedule will be provided). (see stipulation 2).

Stipulations: The permit will be issued with the following stipulations as conditions of the permit. By accepting the permit, applicant agrees to these stipulations:

1. An as-built survey of all stormwater BMPs (ponds, rain gardens, trenches, swales, etc.) is to be submitted to the District for verification of compliance with the approved plans.
2. RCWD inspector must be notified prior to installation of underground system and liner.

Exhibits:

1. Plan set containing sheets L1.1, C1.1, C1.2, C1.3, C1.4, C1.5, C2.1, and C2.2 dated 2-10-2017 and received 2-10-2017.
2. Permit application, dated 2-13-2017 and received 2-13-2017.
3. Stormwater Calculations, dated 2-10-2017 and received 2-10-2017, containing narrative, drainage maps, HydroCAD report for the 2-year, 10-year, and 100-year rainfall events for proposed and existing conditions.
4. Environmental Assessment Worksheet dated January 2017 and received 2-14-2017.
5. Geotechnical report dated 7-3-2010 and received 2-10-2017.

Findings:

1. Description – The applicant is proposing an ice hockey arena and associated sidewalks and driveway access. The project will increase the impervious area by  $1.25\pm$  acres, from  $4.32\pm$  acres to  $5.57\pm$  acres within the project area. The project will disturb approximately  $4.20\pm$  acres overall. The majority of the project drains to the proposed BMP and then to an existing pond which discharges to CR 12/Stillwater Road, and then to Washington Lake, the resource of concern. A small portion of the project drains to an existing BMP with discharges across CR 12/Stillwater Road to the Valley Branch Watershed District (VBWD).
2. Stormwater – The applicant is proposing the BMPs as described below for the project:

Proposed BMP Description	Location	Pretreatment:	Volume provided
Lined UGS 1	West of Ice Arena	Sump CB and isolator row	$10,362\pm$ cubic feet below the outlet
Lined Porous Pavers	Southeast of Ice Arena	N.A. – TSS and rate control only	

Soils within the project area are generally clayey sand (SC) and sandy lean clay (CL) which are HSG C/D. Although there are lenses of HGS B silty sands (SM), these pockets are found to be inadequate to support infiltration. Additionally documented contamination has been reported on site. Thus filtration is acceptable to meet the water quality requirement. Per Rule C.6(c)(1), the Water Quality requirement is 2.2-inches over the new impervious area ( $1.25\pm$  acres) for a total requirement of  $9,980\pm$  cubic feet.

The proposed project will provide water quality treatment through an underground filtration basin. The porous pavers are only considered for rate control and TSS removal only, as all areas do not have the required 1-foot of sand. The underground storage system has been designed with 1 foot of sand and 0.5 feet of rock above the drain tile. The sand drainage layer above the drain tile has an infiltration rate of 0.8 in/hr allowing the required drawdown within 72 hours. Adequate pretreatment and separation from the seasonal high water elevation has been provided. An impermeable liner has been placed below the drain tile in the underground storage system and below the drain tile in the porous pavers section.

The applicant is providing treatment to approximately 89% of the required impervious area and has provided TSS removal for the remainder of the project. The underground filtration basin complies with the design criteria of Rule C.9(c) and the project has complied with the water quality requirement of Rule C.6.

Drainage Area	2-year (cfs)		10-year (cfs)		100-year (cfs)	
	Existing	Proposed	Existing	Proposed	Existing	Proposed
West (RCWD)	11.17	10.47	42.16	40.42	158.64	157.40
East (VBWD)	1.99	1.99	3.81	3.81	8.52	8.52
Totals	13.16	12.46	45.97	44.23	167.16	165.92

The project is not located within the Flood Management Zone. The submitted information indicates that the project does not increase peak runoff rates, thus in compliance with District Rule C.7. The project satisfies the freeboard requirements of Rule C.9(g).

The applicant has identified the presence of soil contamination within the project site. On sheet C1.2 and C1.4, the applicant indicates a shaded area labeled "contaminated soils". Sheet C1.2 shows the lined porous pavers located over the shaded area, while Sheet C1.4 shows the lined

underground system outside of the shaded area. The District and its Engineer have not independently reviewed the data or information relating to contamination and have not independently evaluated the risk associated with introducing storm water into the soil matrix. Due to the documented presence of contamination, and pursuant to Rules C.6(d)(2) and C.9(a)(4), infiltration BMPs are not required. The applicant is responsible to confer with any agency with authority over site contamination and/or reuse, and otherwise to ensure that site storm water management conforms to sound design practices (including those documented in the MPCA's *Minnesota Stormwater Manual*) and all legal requirements.

An Environmental Assessment Worksheet (EAW), public review and negative declaration were completed by the applicant for this project. The District has reviewed the EAW, only items relating to District stormwater requirements, and concluded the results do not affect the administration of District rules.

3. Wetlands –There are no wetlands located within the project area.
4. Floodplain – The site is not in a regulatory floodplain.
5. Erosion Control – Proposed erosion control methods include silt fence, rock construction entrances, inlet protection, bio-log, and erosion control blanket. An NPDES permit is required for the project. The information listed under the Erosion and Sedimentation Control Recommendations needs to be submitted. Otherwise, the project complies with RCWD Rule D requirements.
6. Drainage Systems – There are no drainage systems on the property.
7. Documenting Easements and Maintenance Obligations –Applicant must execute an agreement with the RCWD for the maintenance of the stormwater facilities to ensure proper functioning.
8. Previous Permit Information – Previous permit information includes 11-001 and 16-107.

I hereby certify that this plan, specification or report was prepared by me or under my direct supervision and that I am a duly Registered Professional Engineer under the laws of the state of Minnesota.

RE: Additional Traffic Analysis  
Mahtomedi Ice Area  
Grant, MN

## **Introduction**

This memorandum serves to summarize additional traffic analysis underway for the proposed Ice Arena on 75th Avenue N (CSAH 12) in Grant.

Washington County provided comments on the AUAR for the proposed project. Some of those comments requested additional analysis in support of acquiring access permits from the County.

The *Mahtomedi Ice Arena Traffic Impact Study* was completed in November 2016. That document concluded that the access driveway would function acceptably under Phase I conditions.

Subsequent to that document, a traffic signal was constructed at the intersection of 75th Avenue N & Mahtomedi High School. That new traffic signal could serve as the primary access point during events, which would include diverting exiting traffic through an internal backage road to the new traffic signal. Although this would be a circuitous route from the ice arena, this may provide the best solution for operations and safety.

After discussion with County staff, there could be concerns over the long distance detour from the parking lot to the new traffic signal at the High School entrance, considering the proximity to the immediate unsignalized access.

This analysis has acquired updated traffic counts on 75th Avenue N (CSAH 12) and has updated traffic analysis to show future operations with the driveway operating as the exit point during events.

The County also requested a sensitivity analysis based on different traffic splits, or origin/destination patterns, between eastbound and westbound and how that would affect traffic operations.

## **Traffic Data**

Turning movement counts were performed at the intersection of 75th Avenue N (CSAH 12) & the existing access on October 4, 2018 between 6 PM and 10 PM. The data is attached to this memo. It should be noted that these counts see traffic entering and exiting the driveway to use the ballfields or

soccer fields. It is not likely that these entering and exiting driveway volumes will carry over to the hockey season.

Figure 1 shows the updated existing event peak period traffic volumes - 6:30-7:30 PM (event entering) and 9-10 PM (event exiting).

### Intersection Capacity Sensitivity Analysis

County staff commented during AUAR review that 80/20 trip distribution split between west/east may not properly reflect regional ice arena patrons. Since left-turn exiting traffic experiences more delay, it was requested to perform a sensitivity analysis for Phase I exiting conditions to determine if/when southbound left-turn delays become unacceptable.

Table 1 shows the east/west splits, entering and exiting traffic volumes, and expected southbound left-turn movement LOS, control delay, and 95th percentile queue. The analysis uses updated traffic volumes on 75th Avenue N (CSAH 12). It should be noted that the driveway has a left-turn lane and right-turn lane, and that the analysis used a PHF of 0.33 for the southbound approach to simulate event exiting traffic.

Distribution	SB Right Turns	SB Left Turns	Southbound LTL		
			LOS	Control Delay (s)	95th % Queue
80% west/20% east	229	57	B	11.4	23'
75% west/25% east	215	72	B	11.9	30'
70% west/30% east	200	86	B	12.5	40'
65% west/35% east	186	100	B	13.3	50'
60% west/40% east	172	114	B	14.1	63'
55% west/45% east	157	129	C	15.3	80'

Analysis shows that even with an aggressive 55/45 split west to east, exiting left-turn traffic is projected to see acceptable levels of service for Phase I conditions. This is primarily due to low traffic volumes on 75th Avenue N (CSAH 12) between 9 PM and 10 PM.

The Synchro reports are attached to this memo.

The *Mahtomedi Ice Arena Traffic Impact Study* concluded that the driveway would not function acceptably under Phase II conditions during the event exiting peak hour.

## Conclusion

A sensitivity analysis using updated traffic volumes on 75th Avenue N (CSAH 12) demonstrates that traffic between 9 PM and 10 PM has enough gaps to allow event exiting traffic to function acceptably under Phase I conditions.

Expansion to the proposed ice arena as proposed under the Phase II scenario would require event control or redirecting event exiting traffic to the traffic signal at Mahtomedi High School. The County has provided the following options for Phase II exiting traffic.

- Install directional signing to encourage event exiting drivers to self-select the traffic signal at Mahtomedi High School.
- Prohibit left-turns out of the driveway with traffic cones and law enforcement, which would require eastbound vehicles to make westbound U-turns at the traffic signal.
- Physically close the gate at the driveway during the event exit peak hour, and implement directional signing to the traffic signal.

Brad Reifsteck  
City Engineer for the City of Grant  
701 Xenia Ave. S., Suite 300  
Minneapolis, MN 55416

Re: **Wildwood Surface Water Sampling Report**  
Bellaire Transfer Station #2, 8678 75<sup>th</sup> Street North, Grant  
MPCA Project Number VP16951

Dear Mr. Reifsteck:

On behalf of the Mahtomedi School District (the School District), Landmark Environmental, LLC (Landmark) has prepared this letter report to document the surface water sampling event conducted at the above referenced property (Property). Semiannual surface water sampling is a requirement of the Amended Conditional Use Permit (Amended CUP) which amends the Conditional Use Permit dated August 16, 2006. The Amended CUP states “The Applicant shall be required to submit bi-annual water quality reports for review by the City Engineer. Water quality shall meet stormwater management levels.”

Landmark conducted a site visit on October 18, 2018, and collected surface water samples at Stormwater Treatment Area's A and B, Infiltration Area E1, and Wetland D as shown in **Figure 1**. A photo log of the sampling event is provided in **Attachment 1**.

The samples were analyzed for volatile organic compounds (VOCs) and filtered Resource Conservation and Recovery Act (RCRA) metals and compared to the applicable Class 2D Surface Water Chronic, Maximum, and Final Acute Value Standards as shown in **Table 1**. For comparison purposes, the Minnesota Department of Health Health Risk Limits (HRLs) are also provided in **Table 1**. VOCs were not detected at Stormwater Treatment Area A or B, Infiltration Area E1, and Wetland D. No RCRA metals were detected at any of the four sample locations except for background concentrations of barium in Infiltration Area E1 (23.5 ug/L), and Wetland D (210.0 ug/L), which is well below the MPCA health risk limit (HRL) of 2,000 ug/L. Barium occurs naturally in almost all (99.4%) surface waters (*Drinking Water and Health*, June 1978, National Research Council (U.S.) and Safe Drinking Water Committee). **Table 1** also includes historical surface water sampling results for all four sample locations. The laboratory analytical report is included in **Attachment 2**.

As requested by Julie Osterbauer from the School District, future semi-annual surface water sampling reports will be submitted to you by May 1 and October 1 of each year.

Mr. Brad Reifsteck

RE: Project: MAH  
Pace Project No.: 10452278

Dear Aaron Kuck:

Enclosed are the analytical results for sample(s) received by the laboratory on October 18, 2018. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Annika Asp

## PROJECT NARRATIVE

Project: MAH  
Pace Project No.: 10452278

**Method:** EPA 6010D

**Description:** 6010D MET ICP, Lab Filtered

**Client:** Landmark Environmental

**Date:** October 26, 2018

**General Information:**

4 samples were analyzed for EPA 6010D. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**

The samples were analyzed within the method required hold times with any exceptions noted below.

**Sample Preparation:**

The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

**Initial Calibrations (including MS Tune as applicable):**

All criteria were within method requirements with any exceptions noted below.

**Continuing Calibration:**

All criteria were within method requirements with any exceptions noted below.

**Method Blank:**

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**

All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

**Additional Comments:**

## PROJECT NARRATIVE

Project: MAH  
Pace Project No.: 10452278

**Method:** EPA 8260B  
**Description:** 8260B VOC  
**Client:** Landmark Environmental  
**Date:** October 26, 2018

### General Information:

5 samples were analyzed for EPA 8260B. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

### Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

### Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

### Surrogates:

All surrogates were within QC limits with any exceptions noted below.

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 571409

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 10452340009

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 3100182)
- Hexachloro-1,3-butadiene

### Additional Comments:

Analyte Comments:

QC Batch: 571409

N2: The lab does not hold NELAC/TNI accreditation for this parameter.

- Area A (Lab ID: 10452278004)
  - Dichlorofluoromethane
- Area B (Lab ID: 10452278001)
  - Dichlorofluoromethane

## QUALIFIERS

Project: MAH  
Pace Project No.: 10452278

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.  
ND - Not Detected at or above adjusted reporting limit.  
TNTC - Too Numerous To Count  
J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.  
MDL - Adjusted Method Detection Limit.  
PQL - Practical Quantitation Limit.  
RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.  
S - Surrogate  
1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.  
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.  
LCS(D) - Laboratory Control Sample (Duplicate)  
MS(D) - Matrix Spike (Duplicate)  
DUP - Sample Duplicate  
RPD - Relative Percent Difference  
NC - Not Calculable.  
SG - Silica Gel - Clean-Up  
U - Indicates the compound was analyzed for, but not detected.  
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.  
Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.  
TNI - The NELAC Institute.

### LABORATORIES

PASI-M Pace Analytical Services - Minneapolis

### WORKORDER QUALIFIERS

WO: 10452278

- [1] Samples were received outside of the recommended temperature range of 0-6 degrees Celsius. The samples were received from the field on ice.

### ANALYTE QUALIFIERS

- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.  
MN The reporting limit has been raised in accordance with Minnesota Statutes 4740.2100 Subpart 8. C, D. Reporting Limit Evaluation Rule.  
N2 The lab does not hold NELAC/TNI accreditation for this parameter.
